

Neotys announces the release of a new version of its NeoLoad software.

The recently-established French company extends the monitoring capacity of its software and includes new features

Gémenos (France), July 18 2007

Neotys, the recently established French company specializing in tools for load testing web applications, announces the release of version 2.2 of its NeoLoad software. It may be recalled that version 2.1 of NeoLoad was put on the market in February 2007.

This new version of NeoLoad provides more extensive handling of users' server infrastructures and improved features in terms of web application authentication, proxy handling, managing framework parameters and importing projects.

NeoLoad 2.2, available since July 2007, extends its server infrastructure monitoring and handling capabilities. The package now supports MySQL databases and HP-UX (HP) and AIX (IBM) operating systems, in widespread use in the banking sector, as well as the JBoss application server. Neotys also has updated its monitoring capabilities to include WebLogic v9.

Version 2.2 of NeoLoad has a number of new features too. The web application authentication system now supports Kerberos and Digest technologies. The new version of NeoLoad also allows the user to import projects, providing work-sharing capabilities that will continue to be developed in future versions.

Certain existing features have been upgraded. The newly improved management of web application framework dynamic parameters means that automatic configuration of scenarios is now even easier, a further step towards more simplicity and ease of use. In addition, proxy management has been greatly improved.

Stéphane Jammet, Sales Director for Neotys, notes, *"Since its beginnings, Neotys' aim has been to offer a solution with at least the same capacities as those of its main competitors, while providing the ergonomics and ease of use the others lacked. Although not a major new version, NeoLoad 2.2 nevertheless is another step towards this aim. We intend to continue our development work in order to close the gap on the market leaders and, eventually, to overtake them in terms of features, by boosting NeoLoad's automatic scenario configuration capabilities in particular"*

NeoLoad 2.2 is available under license or on rental scheme. As a guideline, the cost of a license allowing for 250 simultaneous virtual users is € 5,854.00 excl. tax. The cost for a weekly rental for 250 simultaneous virtual users is € 1,464.00 excl. tax. In each case, customer support is included.

About Neotys:

Founded in January 2005, Neotys develops and markets NeoLoad, a program that allows web applications to be load tested prior to the production phase. Based in Gémenos, near Marseille, the software publisher currently has 250 clients in more than 40 countries in Europe, North America and Asia.

At the beginning of 2007, Neotys obtained the "Young Innovating Enterprise" award, issued by the Ministry of Research and supported by OSEO Anvar, the French national organization promoting research. The company has a staff of ten people.
