

## **Neotys Partners with ICEsoft to Provide Stress and Load Testing for ICEfaces Applications**

***NeoLoad enhancements for testing ICEfaces Ajax Push applications coming soon!***

**Merrimack, NH – November 17, 2009** – [Neotys](#), a leader in easy-to-use, cost effective load testing tools for web applications, today announced that it has partnered with ICEsoft Technologies, to offer load and stress testing support for ICEfaces applications.

ICEfaces is an open source Ajax framework for developing and deploying thin-client, rich enterprise applications in pure Java. ICEfaces delivers a dynamic and responsive Java EE web application to any browser, a feature normally limited to thick client-based applications.

ICEfaces leverages the entire standards-based Java EE ecosystem of tools and execution environments. ICEfaces applications are JavaServer Faces (JSF) applications, so Java EE application development skills apply directly, and Java developers are isolated from doing any JavaScript related development.

"NeoLoad's support for ICEfaces is of great value to ICEfaces customers", says Robert Lepack, VP of Marketing and Business Development for ICEsoft Technologies, "With NeoLoad, ICEfaces enterprise developers can monitor, load test, and analyze application performance all within one environment, enabling them to optimize application performance before deployment."

"We are happy to support ICEfaces innovative Ajax framework which is becoming very popular, especially in the banking and insurance sector, a key market for Neotys," said Stephane Jammet, vice president of sales and business development, Neotys. "In the near future, we will further enhance the support of Ajax Push which will offer faster and easier test scenarios management as well as dedicated measurement features. This will strengthen NeoLoad as the best solution to support this new technology eagerly anticipated by developers."

ICEfaces pioneered Ajax Push, enabling server/application initiated content rendering to the browser. With Ajax Push, developers can create collaborative and dynamic Java EE Ajax applications like never before.

NeoLoad is a web stress testing software solution that runs high-load scenarios on web applications to measure performance and robustness prior to deployment. Unlike other web testing tools that require scripting, are overly complex and expensive, NeoLoad is easy-to-use, thanks to an intuitive GUI interface, requires no scripting, and provides a rich feature set at a cost effective price point. NeoLoad supports all web technologies and application server technologies including J2EE, .NET, PHP, AJAX, SOAP, FLASH, FLEX, GWT and Oracle Forms.

**About Neotys [www.neotys.com](http://www.neotys.com)**

Since 2005, Neotys has been helping its clients in more than 50 countries to ensure their applications' reliability, performance and quality. NeoLoad, load testing solution, ensures better efficiency enabling users to perform tests faster, while providing pertinent analyses and full support for all new technologies. At each stage of a project, Neotys consultants are on hand to guide users, thereby ensuring the successful deployment of applications.
