

Neotys Partners With SysTest Labs to Provide Load and Stress Testing of Web Applications

NeoLoad to Become Integral Part of SysTest Testing Services

MERRIMACK, N.H.-- August 2, 2010 [Neotys](#), a leader in easy-to-use, cost effective load testing tools for web applications today announced that [SysTest Labs](#) has become the newest member of Neotys' growing partner program. NeoLoad will become an integral part of SysTest Labs' testing services including the recently launched Partner in Quality (PIQ) program www.partnerinquality.com.

Through PIQ outsourcing, SysTest Labs helps its customers with quality management, including quality planning, quality assurance, and quality control; independent verification and validation; and software performance testing. PIQ is based on a Quality as a Service (QaaS) model that meets the demands of today's rapid software delivery methods. This partnership enables SysTest Labs to have access to Neotys' NeoLoad, a web stress testing software that runs high-load scenarios on web applications to measure performance and robustness prior to deployment.

Neotys certified partners are experts in the field of web application quality and performance, have successfully passed the NeoLoad certification exam and are available to guide customers through performance testing projects.

"High quality testing and performance is the number one priority for our customers," according to Mark Phillips, VP compliance services at SysTest Labs. "With Neotys, our expert consultants can pin-point system performance issues before they become big production problems. We can provide in depth analysis and actionable items and then work to resolve issues which affect performance. Neotys allows us to pre-assess the scalability of the application before deployment and production."

Stephane Jammet, VP of sales and business development, Neotys stated, "SysTest Labs PIQ program offers high-performance, innovative, and quality-driven solutions. The people are experts in software performance engineering and the company's strength is its ability to get involved at any point in its customers' application development life cycles. We are pleased that

SysTest Labs' PIQ program has standardized on NeoLoad to execute all stress and load tests required to understand web application performance.”

NeoLoad is a web stress testing software solution that runs high-load scenarios on web applications to measure performance and robustness prior to deployment. Unlike other web testing tools that require scripting, are overly complex and expensive, NeoLoad is easy-to-use, thanks to an intuitive GUI interface, requires no scripting, and provides a rich feature set at a cost effective price point. NeoLoad supports all web technologies and application server technologies including J2EE, .NET, PHP, AJAX, SOAP, FLASH, FLEX, GWT and Oracle Forms.
