

## **World2one Uses Neotys' NeoLoad to Ensure Heavy User Volume Can Access Web-based Contact Management Software**

### **NeoLoad Allowed Company to Undergo Extensive, Complex Stress Tests in Three Days**

**Merrimack, NH – February 24, 2009** – [Neotys](#), a leader in easy-to-use, cost effective stress and load testing tools for web applications, today announced that [World2one](#) successfully used its NeoLoad to stress and load test its web-based contact management solutions.

World2one offers contact management solutions that enable individuals to share their contact details with their friends and colleagues. Through its social networking [iCARD and iPAGE products](#), users can ensure that their contacts will always be able to get in touch with them even if their contact information changes. Unlike other applications that require contacts to do some type of work, this information is provided effortlessly through World2one's unique patented electronic signature process.

The company anticipates that it will shortly have several million users. In addition, World2one recently signed a master reseller to sell its solution to enterprises. To stay competitive and ensure good customer response time, World2one needed to make certain that its application and servers would be able to withstand the volume of many accessing the application simultaneously.

According to Blaine A. Anaya, network security engineer for World2one, "Good customer service is the lifeblood of any social networking business. We are thrilled that so many individuals have signed on with World2one. To ensure continued reliability and performance for our customers, we turned to NeoLoad."

Before using NeoLoad, World2one tried alternative solutions to perform its load and stress test. These tests proved to be time consuming and difficult to generate the reports necessary to get a clear picture of what actions needed to be taken after each test.

"NeoLoad allowed us to quickly see our results and take action," said Anaya. "We found it to be easy-to-use, yet comprehensive--with excellent documentation. NeoLoad far exceeded our expectations by providing us with a cost-effective testing package that performed both the required testing and the necessary detailed reporting in one solution. Most importantly, we can

confidently ensure our end users and resellers that we can handle thousands of users simultaneously because of the many load and stress tests performed with NeoLoad.”

NeoLoad is a web stress testing software that runs high-load scenarios on web applications to measure performance and robustness prior to deployment. Unlike other web testing tools that require scripting, are overly complex and expensive, NeoLoad is easy-to-use due to its intuitive GUI interface, requires no scripting, provides a rich feature set at a cost effective price point. NeoLoad supports all web technologies and application server technologies including J2EE, .NET, PHP, AJAX, SOAP, FLASH, FLEX and Oracle Forms.

According to Stephane Jammet, vice president of sales and business development, Neotys, “Social networking applications like World2one have created innovative ways to communicate and share information. Social networking websites are being used regularly by millions of people and has become a mainstream part of many people’s lives. With its ever growing member base, we are pleased that World2one depends on NeoLoad to keep up with the increased volume of members performing online communications.”

#### **About Neotys [www.neotys.com](http://www.neotys.com)**

Since 2005, Neotys has been helping its clients in more than 40 countries to ensure their applications' reliability, performance and quality. NeoLoad, load testing solution, ensures better efficiency to perform your tests faster, while providing pertinent analyses and full support for all new technologies. At each stage of your project, the Neotys consultants are on hand to guide you, thereby ensuring the successful deployment of your applications.
