

High Performing SAP Apps with NeoLoad

All The Things with SAP

Picture this. You're at your desk, you contact a customer, a partner, a prospect. You make the appointment. You book the trip. Procure your new machine. Submit your expense reports. These are a few of the everyday tasks that make up your day, run your company and ensure your collective success.

While you're busy running your business on SAP, IT teams make it work. Because not working isn't an option.

Their latest challenge? Migrate all SAP applications to S/4HANA without interrupting operations and business flow. Critical to ensuring migration success is to not degrade performance. That requires a performance testing plan and a performance testing platform that can execute for you.

Simulates realistic user behaviour
For 1000x virtual users

Ensure Performance with NeoLoad

NeoLoad has you covered. Test the full range of traditional on-premise SAP applications and the latest cloud deployments for any SAP application. NeoLoad natively supports all SAP applications and deployments, offering an automated approach to performance test some of your most critical business processes.

With NeoLoad, you can performance benchmark existing on-premise SAP deployments to measure against S/4HANA-deployments and ensure no performance degradation prior to production.

The NeoLoad Difference

Rapid test design

Low script maintenance

No code approach

Quick ramp up

Reuse test assets

Accelerate SAP performance tests, cut the total cost of testing.

Quick Ramp Up

Become proficient in NeoLoad in seven days compared to twice that with other performance testing tools.

Grow your SAP performance testing capacity easily and with limited cost.

Accelerate Performance Diagnosis

NeoLoad provides efficient tools to see if the SAP application is ready for production or not.

React faster when you detect an SAP performance bottleneck and accelerate the deployment phase.

Automatic Test Updates

NeoLoad's automatic script update save 90% of the maintenance time because it only updates the changed portion of the script versus the entire script.

Remove the pain of re-doing test scripts and reduce the cost of SAP performance testing when you implement a new SAP version or change the configuration.

Rapid Test Design

Design SAP tests up to 60% faster than with traditional testing tools

Reduce the cost of testing SAP with better productivity. Spend more time analyzing the tests than creating them.

Reuse SAP Functional Tests for Performance Tests

NeoLoad integrates natively with the leading SAP functional testing tools like WorkSoft Certify or Tricentis Tosca so you can for example re-use functional testing assets as performance tests.

Reuse assets to accelerate test design.

More Realistic Tests

NeoLoad can simulate even the most complex transactions and scale load tests up to thousands of SAP virtual users.

Create more accurate tests, get more confidence when deploying in production.
